

Exam rules

The exam consists of two separate parts.

- Part I (about 40 minutes): two theoretical questions (12 points). You are not permitted to use any materials, including the calculator or WinMIPS.
Part II (about 75 minutes): two programming exercises (18 points). The first is about ARM code; the second requires C code to program the board. During this part, USB keys are forbidden, but you are allowed to access the teaching portal page and use all the material:
 - slides
 - user manual of the board
 - templates uploaded by the teachers
 - a self-customized template, uploaded by the student in the “Elaborati” section
 - lab projects, uploaded by the student in the “Elaborati” section. If the lab projects are uploaded within their deadline (generally, one week after the laboratory), the student is eligible to take part in the last two extra-points projects. Anyway, the student can upload/update the laboratories after the end of lectures.

The duration of each part may slightly change depending on the difficulty of the exercises.

Furthermore, two projects are assigned in the last weeks of the course: they are reserved to students who uploaded the solutions of laboratories on time. For each project solution submitted on time, the student can get up to 2 extra points (up to 4 extra points for both projects).

In the very few days after the exam, the students have to self-correct their programs, starting from the solution completed during part II. Each student has to upload to the teaching portal:

- The .zip of the new version of the Keil project
- The list of ALL changes, in the form of a .doc file where the written-exam-version of the developed functions is in black, and where the deletions are in background red color and the additions are in yellow background color (example: unchanged text, **deleted text**, **modified text**). Not complying with this format and/or not marking ALL errors/ changes will automatically void the exam. Note: you have to report changes only for the developed functions (please avoid including the whole template in the .doc file).

The deadline for uploading the files will be timely communicated after the exam. If the self-corrected solution produces errors during the compiling phase or is incomplete, it will be rejected.

The exam is passed if the student obtains:

- At least 6 points for part I
- At least 9 points for part II
- At least 18 points overall (part I + part II).

Then, the extra points will be added to the final score. Laude will be granted if the mark is higher than or equal to 33 (>32.5).
